

CMMC Evidence Anchoring

Independent integrity validation for:

- Policy version history
- Incident reports
- Security control attestations
- Access change records

Operational Benefits:

- Demonstrable non-repudiation
- Third-party verifiable timestamping
- Reduced audit friction
- Durable evidence preservation

Supply Chain Provenance

Loggie supports:

- Artifact integrity tracking
- Firmware version attestation
- Supplier document anchoring
- Contract milestone verification

Outcome:

- Improved defensibility across
- prime / subcontractor workflows

Autonomous Mission Logs

Applicable to:

- UAS flight records
- Telemetry snapshots
- AI decision events
- Maintenance records

Capability:

- Tamper-evident anchoring
- Post-incident reconstruction support
- Independent timeline verification

Incident Reconstruction

In high-liability environments:

- Integrity of operational logs
- becomes critical
- Neutral, timestamped record lineage
- Litigation and insurance defensibility

Loggie establishes an independent integrity layer beneath operational systems
used in regulated and defense-adjacent environments.
